un_function(heat):

Fold a piece of paper with both hands
until you feel the heat of your hands though the
paper. Exploring this heat, what
creases come up?
(are left behind?)

un_function(crumbling):

How many lines
can you trace on
a piece of paper
with your fingertip?
What way could there
be more lines on the paper? What can you do make the
paper become a topography? How are you and the
material interconnected?

important
to this are
- incomplete:
there is no way to
complete this model

- contradictory: this is a
model that is about undoing

- interconnected: between you and
the material.

- transformative: shape and perception
change are encouraged

- political: embodied, no totality, no cmd/
ctrl, embracing destruction, repurposing,

- leaving room for the unknown:

crumbling model of computation
this un-model is about speculative form change, the
possibility of destruction and inventing towards non
coercive infrastructures.
